

Getter Line 3mm thick Getter is set in a 0.6mm deep groove in glass outer pane.

LandVac®

Tempered Vacuum Insulated Glass

Getter line is 3mm thick - length is determined by the unit size. It is typically located along a long edge, but in tall, narrow units it may extend along a horizontal and vertical side.

Area of each glass (S/m ²)	Length of Getter (L/mm)	Area of each glass (S/m ²)	Length of Getter (L/mm)
$S \leq 0.1$	50	$2 < S \leq 3$	800
$0.1 < S \leq 0.5$	200	$3 < S \leq 4$	1000
$0.5 < S \leq 1$	400	$4 < S \leq 5$	1200
$1 < S \leq 2$	600	$5 < S \leq 6$	1400

Getter groove is divided into multiple processing when the sum of the groove lengths $\geq 400\text{mm}$ or the pane area $> 1\text{m}^2$, the distance between the tool lifting point and falling point is 50mm.

Maximum Unit Size 1450mm x 2480mm. For larger units consider LandVac Heritage.

Minimum Unit Size 190mm x 230mm.

Shapes are widely available.
Edge deletion increases to 16mm on shaped items.

All dimensions in mm.
